

T-BOSIET with CA-EBS

Tropical Basic Offshore Safety Induction & Emergency Training with Shallow Water Compressed Air Emergency Breathing System

This course is developed to introduce learners to the specific safety issues and regimes relevant to offshore installations, and to equip them with the basic emergency response knowledge and skills for travelling to and from offshore installations by helicopters equipped with compressed air type emergency breathing systems (CA-EBS) in tropical environments.

This course can be delivered with Rebreather type EBS (EBS) rather than Compressed Air type EBS and Travel Safely by Boat (TsbB). Stand-alone T-BOSIET can also be taken as Digital Delivery (DD) with online theory & 1 day traditional practical.

General Course Objectives

The objectives of the T-BOSIET with CA-EBS are that learners will be able to:

- Identify the generic hazards that are specific to offshore oil and gas installations, potential risks associated with those hazards, and how controls are put in place to eliminate or reduce risks.
- Identify key offshore related safety regulations and explain the basic safety management concepts.
- Demonstrate that they can use the safety equipment, and follow procedures in preparing for, and during helicopter emergencies with particular focus on escaping from a helicopter following ditching.
- Demonstrate sea survival and first aid techniques.
- Demonstrate that they can effectively use basic fire fighting equipment, and practise self-rescue techniques in low visibility situations, to include smoke filled areas.

Course Content

- Safety Induction
- Fire Fighting & Self Rescue
- Sea Survival & Lifeboat (TEMPSC) training
- First Aid & Hypothermia
- Helicopter Safety Procedures & Helicopter Underwater Escape Training (HUET) including the use of CA-EBS
